The Unified Field Structure for Systematic Theology:
A Proposal
© Copyright by Robert M. Doran 2002

1 The Thesis

The fundamental thesis of this paper is that there is at hand a unified field structure for the functional specialty ‘systematics.’ A subsidiary thesis is that previous attempts, including my own, to state what that structure is have not quite hit if off correctly, even as they have made contributions to its accurate presentation. Think here of the first chapter in his dissertation, on ‘The Forces of the Development and on the Movement from Specific Theorems to Genera theoriae et a Synthesis of the Two.’ I think matters have been going forward here.

---

1 On the principal and subordinate functions of systematic theology, see my article ‘Bernard Lonergan and the Functions of Systematic Theology,’ in Theological Studies 59:4 (1998) 569-607. For the phrase ‘the systematic conception of systematic conceptions,’ see the first of the Monsour papers mentioned below in section 3.
and it leaves itself open to further enrichments and differentiations analogous to those that it adds to the Thomist conception.

Thus, to draw on another of Monsour's articulations, the basic organizing conception will stand to systematics as the periodic table stands to chemistry. But it will also stand to a contemporary systematics as the theorem of the supernatural joined to Aristotelian metaphysics stood to the emergent systematics of the Middle Ages as it came to its first great synthesis in Aquinas, and it will be a genetic development upon that structure. The conjunction of the theorem of the supernatural with Aristotelian metaphysics provided a unified field structure for its time, but an adequate contemporary field structure would make systematics historically conscious and would place it in tune with modern scientific methods and achievements. A contemporary systematics has to be able to address problems and relate to theological functional specialties that had not emerged at all at the time that Thomas did his work. Like the medieval organizing conception, this unified field structure combines a specifically theological element with a more general set of categories. The theorem of the supernatural was the specifically theological component of the medieval conception, and Aristotle's metaphysics provided its general categories. The principal specifically theological element in the unified field structure now at hand is a four-point hypothesis proposed in Bernard Lonergan's systematics of the Trinity. The hypothesis differentiates the theorem of the supernatural into into a set of connections between the four trinitarian relations — paternity, filiation, active spiration, and passive spiration — and the created supernatural participations in those relations: the secondary act of existence of the Incarnation is a created participation in paternity, sanctifying grace a created participation in active
spiration, the habit of charity a created participation in passive spiration, and the light of glory a created participation in filiation. And so it enables a synthetic understanding of the four mysteries of the Trinity, the Incarnation, grace, and the last things.

Now, over the past few years there has developed a discussion at the Lonergan Research Institute, Toronto, and in some of the systematic courses at Regis College, and at the Lonergan Workshop, as to whether this four-point hypothesis is adequate in itself to function as a unified field structure for systematics. That discussion has spilled over into several publications. At least two presentations at the Lonergan Workshop at Boston College addressed the issue, one by myself in 2000, as a small part of a larger paper, and one by Daniel Monsour in 2001. I now want to add to the discussion. And I begin by proposing that, however synthetic the four-point hypothesis may be, it does not stand on its own; it is not enough to unify a synthetic theological understanding. There are several reasons for this.

First, while a specifically theological element in the unified field structure is provided by the four-point hypothesis, there are other specifically theological realities, and so other special theological categories, that a unified field structure must integrate, and they cannot be mapped adequately onto the four-point hypothesis. I have in mind categories regarding revelation, redemption, the church, sacraments, and Christian praxis in the world. While all of these are intimately related to the elements expressed in the four-point hypothesis, still they are not organized by that hypothesis alone.

Second, while the integration of these further theological realities will not involve adding something completely extraneous to the four-point hypothesis, still that integration will locate the divine missions, which are at
the heart of the four-point hypothesis, in creation and especially in the
history whose dynamics of progress and decline are part of the focus of the
missions in the first place. If possible, the missions must be located in
creation and in history, not vaguely but precisely. And I believe this can be
done through the scale of values, which, as a key to the theory of history,
will form an additional component in the unified field structure. But this
means that these theological realities must be integrated not only with one
another but with the order of the universe and with other realities
constitutive of human history, that is to say, with realities that are known by
sciences and scholarly disciplines other than theology. An additional set of
sets of categories beyond those rooted in the four-point hypothesis is
required for such a theological synthesis to take place. *General* theological
categories are required even for the adequate theological understanding of
specifically theological realities. As the medieval theorem of the
supernatural needed a metaphysical system if it was to mediate religion and
a cultural matrix in the theology of Thomas Aquinas, so the four-point
hypothesis requires general categories shared with other disciplines if the
divine missions that are at the core of the hypothesis are to be located in
relation to their historical occasions and effects. More precisely, a mission
is for a purpose, and the divine missions are for the purpose of establishing
and confirming interpersonal relations; and interpersonal relations are the
core element in the structure of the human good that is coincident with the
immanent intelligibility of history. Thus understanding the divine missions
entails understanding the history that the Word was sent to redeem from the
alternating cycles of progress and decline and that the Holy Spirit is sent to
renew with the outpouring of self-sacrificing love.
In many ways, I could say that I have made this point in previous contributions to this discussion. But I have not been precise enough about where the general categories are to be located. The set of sets of general categories will be based in the cognitional theory, epistemology, and metaphysics of Insight, in the existential ethics of Insight and Method in Theology, and in the theory of history proposed by Lonergan over the span of his writings and complemented by the contributions that I have tried to offer in Theology and the Dialectics of History. My thesis, then, is that, taken together, these two elements — a four-point theological hypothesis and what Lonergan calls the basic and total science, the Grund- und Gesamtwissenschaft, especially as the latter issues in a theory of history — provide the basic framework, the set of terms and relations, of a unified field structure for systematic theology. This is a development on the position that I expressed at the Workshop two years ago, where the proposal was limited to the four-point hypothesis and the theory of history. These remain the principal components, but the general categories include much more, as is clear already from Lonergan’s discussion of them in Method in Theology.²

² See Lonergan, Method in Theology (latest printing, Toronto: University of Toronto Press) 285-88. If further confirmation is needed, consider the following statement: ‘… theology sublates philosophy to define its special categories while it derives from philosophy its general categories,’ where by ‘philosophy’ is meant precisely the Grund- und Gesamtwissenschaft referred to here: cognitional theory, epistemology, metaphysics, and existential ethics. The quotation is from Bernard Lonergan, ‘Questionnaire on Philosophy: Responses by
With the four-point hypothesis and the philosophical positions that are for
the most part already in place in *Insight* and that are complemented where
necessary by later developments, we have everything we need to begin
constructing a systematic theology. Every further category that will emerge
in systematics will be validated by its connection with the categories that
frame this unified field structure. Lonergan says as much, I believe, in
section 3.121 of his response to a ‘Questionnaire on Philosophy’ sent to him
in preparation for a symposium on philosophical studies for Jesuits. In brief,
‘... the Christian religion as lived is the sublation of the whole of human
living. It follows at once that to thematize the sublation of the whole of
human living is a task beyond the competence of theology as a particular
science or particular discipline, that theology can perform that task only by
broadening its horizon by uniting itself with philosophy as the basic and
total science.’ Moreover, ‘theology is the sublation of philosophy. For
philosophy is the basic and total science of human living. The Christian
religion as lived is the sublation of the whole of human living. Hence the
Christian religion as thematized is the sublation of the basic and total science
of human living.’ At one point that sublation yields a theologically
transformed theory of history, and here is where the principal though not
sole general categories of systematics will be applied.

3 Ibid. 7-8.
2 The Four-point Hypothesis

The four-point hypothesis is familiar to those who have followed the discussion to date on this question of a unified field structure.

... there are four real divine relations, really identical with divine being, and so four special ways of grounding an imitation or participation \textit{ad extra} of God's own life. And there are four absolutely supernatural created realities. They are never found in an unformed or indeterminate state. They are: the secondary act of existence of the Incarnation, sanctifying grace, the habit of charity, and the light of glory.

Thus it can appropriately be maintained that the secondary act of existence of the Incarnation is a created participation of paternity, and so that it has a special relation to the Son; that sanctifying grace is a [created] participation of active spiration, and so that it bears a special relation to the Holy Spirit; that the habit of charity is a [created] participation of passive spiration, and so that it has a special relation to the Father and the Son; and that the light of glory is a [created] participation of filiation that leads perfectly the children of adoption back to the Father.\textsuperscript{4}

This passage explicitly embraces the doctrines of the triune God, of the Incarnate Word, of the inhabitation of the Holy Spirit, and of the last things, and it does so in such a way that the mysteries affirmed in these doctrines are related systematically or synthetically to one another. Thus it

presents in a systematic order some of the principal realities named by the special categories, the categories peculiar to theology.

3 Previous Discussion on the Issue

The discussion of these issues to which I have already alluded has been focused in two papers by Daniel Monsour. The first is entitled ‘The Categories “Gratia Increata et Creata” and the Functional Specialty Systematics.’ It was presented for discussion at a Lonergan Research Institute Graduate Seminar, in Toronto, on 18 November 1999. It has not been published. The second, ‘The Four-point Hypothesis and the Special Theological Categories,’ was delivered at the Lonergan Workshop in 2001 and will be published in the proceedings of that Workshop. The terms of the question are adequately displayed, I believe, in these two papers. The second repeats many of the general points made in the first, but goes on to develop a much more complete argument in favor of an antecedent likelihood that the four-point hypothesis will provide the integrating principle.

The first paper frames the question in terms of a problem raised by Henri Rondet in his book The Grace of Christ. Rondet states that Western Catholic thought on grace has been one-sided. The questions of grace and freedom, grace and merit, justification and predestination are divorced from the emphases of the Greek Fathers on divinization, adoption, union with Christ, and the Indwelling of the Holy Spirit. There is in Western Catholic theology a split between the tract on grace and the treatise on the Trinity, which discusses the mission of the Holy Spirit. Created grace has been in the foreground of Western Scholastic theology, while the gift of the Holy
Spirit has been severely underemphasized. But the final chapter of *De Deo trino, Pars systematica*, overcomes this trend, Monsour claims. Some earlier attempts to overcome the ‘error in perspective’ in the dominant trend — notably, those of M.J. Scheeben in the nineteenth century and Karl Rahner in the twentieth — proved inadequate because of their use of formal causality or quasi-formal causality as a way of understanding God’s self-communication and so the relation between the gift of the uncreated Holy Spirit and the created grace on which the Western paradigm placed its emphasis. The integration of the two emphases is achieved in principle, in would seem, in Lonergan’s treatment of the divine missions, and perhaps only there.

But Monsour’s question goes further than simply seeking a more satisfactory theory on this precise issue. He asks whether there can be found in Lonergan’s writings and especially in his theology of the divine missions ‘a more comprehensive perspective … that would not only successfully overcome the split … but … also weigh against any such split or disconnection and systematically favor and promote … the systematic understanding of the mysteries of faith’ (p. 3). He frames the question more precisely by appealing to what Lonergan says about systematic conceptions. A systematic conception is a conception that expresses an understanding that is virtually sufficient for the resolution of all the questions of some systematic tract. It is the organizing and integrating principle of the tract, expressing as it does the comprehensive understanding that mediates the relation of every less comprehensive conception in the tract to every other less comprehensive conception in the same tract. Monsour goes on from that notion to ask whether there are systematic conceptions of systematic conceptions, that is, ‘systematic conceptions that function as organizing and
integrating principles for other systematic conceptions.' Is there 'a
systematic conception that can function as the organizing and integrating
principle for every other systematic conception'? (p. 5) If there is, he says,
'it would be the conception that expresses an understanding of the
organizing and integrating principle that is virtually sufficient for the
resolution of all questions in the functional specialty Systematics,' that is, in
every tract in systematic theology (pp. 5-6). It would mediate the relation of
every less comprehensive conception in the whole of systematics to every
other less comprehensive conception in the whole of systematics.

Monsour cites both Matthew Lamb and myself as alluding to what
might be a candidate for such a status in systematic theology, namely, the
four-point hypothesis that has been quoted above. Moreover, he argues that
an appropriate name for such an organizing conception would be a 'unified
field structure' for systematics. He chooses this name in preference to
'axiom,' as in Karl Rahner's term Grundaxiom, and again in preference to
'unified field theory,' the term used in physics. 'Axiom' suggests, he says,
something self-evident, or perhaps a fundamental proposition from which
one can draw conclusions logically; and neither of these characterizations
applies to the four-point hypothesis. And the unified field theory that
physicists desire to achieve would bring physics, at least in its present phase,
to a close, whereas the four-point hypothesis or for that matter any unified
field structure, if accepted, would do anything but bring systematics to a
close; in a sense, it would enable it to begin, by providing its fundamental
organizing and integrating principle. It would enable the construction of a
systematics that to date remains, for all practical purposes, not yet
assembled. Again, 'just as metaphysics is the whole in knowledge, but not
the whole of knowledge, so,' suggests Monsour, 'the hypothesis [or any
other unified field structure] might be considered the whole in Systematics but not the whole of Systematics.’ Thus the question is whether the four-point hypothesis may be ‘virtually sufficient for the resolution of all questions in the functional specialty Systematics,’ (p. 8) where ‘virtually sufficient’ does not have a logical meaning but a heuristic one. Still, a caveat is added: ‘... though it would certainly function heuristically in Systematics, the hypothesis is not purely heuristic, for it contains theological content’ (p. 8).

After discussing some of the difficulties presented by the hypothesis and relating them in a very creative way to what Lonergan says in the third part of De constitutione Christi ontologica et psychologica about the classification and resolution of the truths we know about God, Monsour proposes in the first of his two papers a test of the viability of the hypothesis as a unified field structure for systematics: ‘Take some or all of the five sets of special theological categories enumerated by Lonergan in Foundations and actually attempt to work out tentatively the categories belonging to each set. Then transfer whatever categories one has derived in Foundations into Systematics and try to map them onto the proposed unified field structure ... If it is truly a unified field structure for Systematics, it would ... provide the organizing principle integrating all the categories of all the five sets. To the extent that one continued to succeed in mapping the categories onto the hypothesis, to that extent one continues to confirm the hypothesis as indeed a unified field structure for Systematics’ (p. 16). In this regard, Monsour speaks of some categories being ‘mapped onto the structure through their connection with the four absolutely supernatural [realities] understood as participations in the four real subsistent relations’ (p. 17). Furthermore, ‘if one supposes that the categories in each of the five sets are intrinsically
irreducible to the categories of any of the other sets, then not only will there be a permanent diversity in Systematics, that no proposed unified field structure will abolish, but also with each successful transfer and mapping of categories onto the unified field structure, the structure itself, while retaining its identity as an organizing and integrating principle, will be enriched and rendered more complex' (p. 17).

So much for the initial framing of the question. In his second paper, Monsour begins the test. He begins to attempt mapping the five sets of categories onto the four-point hypothesis. He insists that he has 'no intention of adopting a definitive position as to whether it is possible and theologically sound and fruitful to bring together Lonergan’s four-point hypothesis and the set of five special theological categories.' ‘... all I propose to offer here,’ he says, ‘is a set of inchoate considerations that perhaps may incline one to regard the attempt to bring the four-point hypothesis and the special theological categories together as a worthwhile and promising line for subsequent investigation’ (19).

Those considerations, however inchoate they may be, are nonetheless quite complex. There are eight of them. I will not summarize the arguments here, since they will be readily available in publication soon. Suffice it to say that Monsour begins by asserting an antecedent likelihood that the four-point hypothesis will provide the integrating principle for the five sets of special categories, and that the rest of his points build on this initial assertion.
4 A Distinction

I will review the five sets of theological categories later in this paper. But I wish to indicate now my own position on the issue as it has been framed by Monsour. My position is twofold.

First, in my view only the third set of special categories can be completely mapped onto the four-point hypothesis. The mapping of the third set will resolve the initial problem with which Monsour began, namely, the divorce between Trinitarian theology and the theology of grace and the imbalance and loss of perspective in the relations between the theological conceptions of uncreated and created grace. But, I propose, any attempt to map the other sets onto the four-point hypothesis is really reducing the other sets to the third set. And if the other sets cannot be mapped without remainder onto the four-point hypothesis, then clearly more is needed if we are to arrive at a unified field structure for the functional specialty Systematics, and this on Monsour’s test itself. Not even all the special categories can be adequately mapped onto the four-point hypothesis.

Second, I would make an important distinction: it is one thing to integrate the special categories, and it is something further to integrate the functional specialty ‘systematics.’ Systematics is more than the special categories, however integrated and synthetic may be their presentation. Let me elaborate.

Lonergan’s method and the emphases that I have highlighted in several articles on the method of systematic theology

5 In addition to the article mentioned in note 1 above, see ‘System and History: The Challenge to Catholic Systematic Theology,’ in
the four-point hypothesis a twofold requirement. First, the objects intended in this statement must be spoken of in categories based in interiorly and religiously differentiated consciousness. The categories employed to frame the hypothesis itself are derived, not basic. In Lonergan's words, '... general basic terms name conscious and intentional operations. General basic relations name elements in the dynamic structure linking operations and generating states. Special basic terms name God's gift of his love and Christian witness. Derived terms and relations name the objects known in operations and correlative to states ... For every term and relation there will exist a corresponding element in intentional consciousness.' More

6 Lonergan, _Method in Theology_ 343. Two comments must be made on this passage. First, it does not mention 'special basic relations.' I have searched related texts in the Lonergan archives, to see whether perhaps something was omitted by mistake in the typing of the manuscript for publication, but I have found nothing to indicate this. So I would like to raise the question whether the four-point hypothesis itself might provide us with the hint as to where we might find special basic relations. I have in mind especially the relation between sanctifying grace and charity as created participations, respectively, of active and passive spiration. If there is anything to this suggestion, then the religiously differentiated consciousness that would enable us to grasp what is meant by distinguishing sanctifying grace and the habit of charity might be the source of special basic relations.
specifically, since the four-point hypothesis speaks of realities that are named in special categories, the base of these categories in religiously differentiated consciousness must be specified as carefully as possible. But general categories will be important even in unpacking the hypothesis in its own terms, since (1) the divine relations are based in the divine processions, (2) the processions are understood by analogy with intelligible emanations of word and love in human consciousness, and (3) the categories that express such emanations are not peculiar to theology but are fundamental to the Grund- und Gesamtwissenschaft whose fundamental components Lonergan has put forth in Insight. But a differentiation in terms of religious experience is also required, and this is particularly true for the second and third points of the hypothesis, those having to do with sanctifying grace and the habit of charity as created participations, respectively, of active and passive spiration.

The second requirement builds on an argument that I have offered elsewhere, which is in harmony with elements that appear in Lonergan’s papers at the time of his breakthrough to functional specialization. The argument was to the effect that systematics is to assume the general form of

Second, as I will try to indicate later, the ‘corresponding element’ that identifies the basic term or relation may be found either in intentional consciousness, as Lonergan says – and this is most often the case – or in nonintentional consciousness, as is the case in what St Ignatius Loyola calls ‘consolation without a cause’ as interpreted by Karl Rahner and Lonergan as consolation with a content but without an apprehended object. Any conscious state that is not a response to an apprehended object is nonintentional.
a theology of history. And building on it means that the primary general categories must be those that enable us to formulate a theory of the complex dialectical process of human history. These categories include preeminently those that Lonergan has employed to speak of progress, decline, and redemption as constituting the basic structure of history, and the structure of the human good that he has proposed most clearly in Method in Theology. But complementing these are other categories that can be found in Lonergan’s work and added to his analysis of history: principally, the scale of values as explaining the intelligible ongoing relations among three complex dialectical processes — in the subject, culture, and community — and so as providing further details of the dynamics of progress and decline in history. This mediation of general and special categories in a theology of history is required if we are to relate the doctrines of Trinity, Incarnation, grace, and eschatology concretely to the processes of history and to add to the core systematic spheres of Trinity, Incarnation, grace, and eschatology the understanding of doctrines regarding revelation, redemption, the church, the sacraments, and the praxis of religious persons, of Christians, of Catholics, and of the Christian churches. The doctrines on revelation, redemption, church, sacraments, and praxis are not explicitly included in the core ‘focal meanings’ contained in the four-point hypothesis, but positions in their regard are obviously demanded in a systematic theology. And those positions cannot be developed without a theory of history. Even the four-point hypothesis contains a demand for expansion into a theory of history, since at the core of the hypothesis is the theology, not only of the immanent Trinity — there are four real divine relations, really identical with divine being — but also and especially of the divine missions; and the divine missions are the Trinity in history, for the missions are identical with the
divine processions joined to created external terms that are the consequent created conditions of the fact that the processions are also missions.

5 History and the Special Categories

This second requirement can be further illustrated by turning to Monsour’s test and appealing to Lonergan’s five sets of special theological categories, but now to argue that the four-point hypothesis will not be able to integrate the second, fourth, and fifth of these sets into an overall systematic exposition unless there is added to it the theory of history that issues from the Grund- und Gesamtwissenschaft, the basic and total science, of Insight and Method in Theology.

The first set of special categories, then, is derived from religious experience. These categories will emerge from ‘studies of religious interiority: historical, phenomenological, psychological, sociological. There is needed in the theologian the spiritual development that will enable [one] both to enter into the experience of others and to frame the terms and relations that will express that experience.’

A second set has to do, not with the subject but with ‘subjects, their togetherness in community, service, and witness, the history of the salvation that is rooted in a being-in-love, and the function of this history in promoting’ the reign of God in the world.8

A third set ‘moves from our loving to the loving source of our love. The Christian tradition makes explicit our implicit intending of God in all our intending by speaking of the Spirit that is given to us, of the Son who

7 Lonergan, Method in Theology 290.

8 Ibid. 291, emphasis added.
redeemed us, of the Father who sent the Son and with the Son sends the Spirit, and of our future destiny when we shall know, not as in a glass darkly, but face to face."

A fourth set differentiates authentic and inauthentic humanity and authentic and inauthentic Christianity. '... to the inauthentic [person] or Christian, what appears authentic is the inauthentic. Here, then, is the root of division, opposition, controversy, denunciation, bitterness, hatred, violence.'

And a fifth set 'regards progress, decline, and redemption. As human authenticity promotes progress, and human inauthenticity generates decline, so Christian authenticity — which is a love of others that does not shrink from self-sacrifice and suffering — is the sovereign means for overcoming evil. Christians bring about the kingdom of God in the world not only by doing good but also by overcoming evil with good ... Not only is there the progress of [humankind] but also there is development and progress within Christianity itself; and as there is development, so too there is decline; and as there is decline, there also is the problem of undoing it, of overcoming evil with good not only in the world but also in the church.'

Now, obviously the third set matches the four-point hypothesis almost point by point, so that it can safely be said that this set can be mapped without remainder onto the hypothesis. Moreover, I believe the hypothesis provides a key to clarifying religious experience, and so is relevant to elements of the first set of special categories. But mapping the other three

9 Ibid.
10 Ibid.
11 Ibid.
sets onto the hypothesis is not only more difficult; in the last analysis, it is, I believe, impossible. One can relate the other three sets to the third set, and so to the hypothesis, but any attempt to go further would be an attempt to reduce the other three sets to the third. The other three sets demand that a framework that locates within, or in relation to, the dialectical dynamics of history the four created supernatural realities that are the created consequent conditions either of the divine missions (the esse secundarium of the Incarnation, sanctifying grace, and the habit of charity) or of the beatific vision (the light of glory). The categories that detail the relation of these created supernatural realities to history are required if we are to have a systematics of revelation (which, as Lonergan says, introduces a new meaning into history), redemption, the church, the sacraments, and Christian praxis.

The four-point hypothesis, then, has to be placed in history. Speaking as it does of the divine missions certainly does locate it in history, but it has to function within a conception of history that will enable the integration of the second, fourth, and fifth sets of special categories into the overall systematic conception. The created contingent external terms that make possible that there are divine missions are not enough to allow for this integration. The divine missions have to be related in a thematic and explicit manner to the dynamics of history. That can be done only by developing a theological theory of history. The four-point hypothesis does not in itself tell us anything about what the Incarnation and the Indwelling of the Holy Spirit have to do with historical progress and decline, whereas revelation, redemption, the church, the sacraments, and Christian praxis cannot be
understood apart from historical progress and decline. As Lonergan himself wrote at the time of his breakthrough to the notion of functional specialization, a contemporary systematic theology in its entirety must be a theological theory of history; or again, the mediated object of systematics is _Geschichte_. We may conclude, then, that the basic organizing systematic conception must contain, in addition to the four-point hypothesis, the fundamental elements of a theological theory of history. And I would propose that those fundamental elements are provided at least in an incipient fashion in Lonergan’s analysis of the dialectic of history in terms of progress, decline, and redemption and in the complementary suggestions that I offer in _Theology and the Dialectics of History_. While there is no doubt that further work (for example, in social theory and economics) will uncover other elements and so other categories, these give us enough to get started.

12 In a discussion period at the 1962 Institute at Regis College, Toronto, on ‘The Method of Theology,’ Lonergan expressed a conviction that the sacraments and the church are two areas in systematic theology in which an enormous amount of work needs to be done. In fact, he said, there is needed even doctrinal development in these areas. ‘The fundamental developments are: the trinitarian doctrine in which the key element is the consubstantial; christological doctrine: one person and two natures; the idea of the supernatural, habit and act. There is then the field in which the categories are not yet fully developed. For example, categories as to the instrumental causality of the sacraments; they have to be developed more fully. There is also _everything regarding history and the mystical body, and the church_; all these need further development.’ (Emphasis added)
and provide the basic map or grid for locating the elements that further work will discover, just as the periodic table provides the basic grid for locating further atomic elements.

6 Glimpsing Some Implications

Perhaps we can already glimpse the enormous theological implications of the twofold methodological insistence on basing everything in interiority and on locating everything in relation to history. It is one thing to transpose, for example, trinitarian theology into categories dictated by interiorly and religiously differentiated consciousness. We are already familiar with the historical antecedents of such a transposition in the psychological analogies first of Augustine and then of Aquinas. Lonergan in Divinarum personarum and then in De Deo trino transposes the psychological analogy into categories explicitly derived from interiorly differentiated consciousness. But to add to this requirement the additional demand that all of this material must be formulated in terms of a theory of history adds a new dimension. The direct impact, of course, is on that portion of trinitarian theology that treats the divine missions, and particularly the mission of the Holy Spirit. But the implications are more far-reaching.

The theory of history based on the interrelations of the levels of value — from above, religious, personal, cultural, social, vital — proposes that the recurrent intelligent emanation of the word of authentic value judgments and of acts of love in human consciousness (personal value) is due to the grace of the mission of the Holy Spirit (religious value) and is also the source of the making of history, of historical progress through schemes of recurrence in the realms of cultural, social, and vital values. But the mission of the
Holy Spirit is the procession of the Holy Spirit joined to a created, contingent external term that is the consequent condition of the procession being also a mission or of the proceeding Holy Spirit not only proceeding ad extra within the Godhead but also being sent. Thus the intelligent emanation in God of the Holy Spirit, the eternal procession in God of the Holy Spirit, joined to the created, contingent, consequent external terms that are sanctifying grace and the habit of charity (as well as to the operative movements that are known as auxilium divinum or actual grace), the eternal intelligent emanation of the Spirit in God as also Gift in history, is the ultimate condition of possibility of any consistent or recurrent intelligent emanation of authentic judgments of value and schemes of recurrence rooted in acts of love in human beings. This collaboration of intelligent processions, divine and human, is, then, the condition of the possibility of the consistent authentic performance of what Lonergan calls the normative source of meaning in history.\textsuperscript{13} And if such personal value conditions the possibility of functioning schemes of recurrence in the realms of cultural, and then social, and then vital values, if that normative source, functioning communally, is the origin of progress in history, then the mission of the Holy Spirit, which is identical with the eternal procession of the Spirit joined to the created, contingent, consequent term of charity, and so the Spirit as Gift, is the very source of progress in history. Conversely, wherever genuine progress (measured by fidelity to the scale of values) takes place, the Spirit is present and active. The combination of the four-point hypothesis with the

theory of history thus enables us to relate trinitarian theology, and even the theology of the immanent Trinity, directly to the processes not only of individual sanctification but also of human historical unfolding. The discernment of the mission of the Holy Spirit thus becomes the most important ingredient in humankind's taking responsibility for the guidance of history.
